

Your Weekly Visits.

WASH 1

Skin appears brighter and smoother. There is a general overall improvement.

WASH 2

Skin appears smoother. There may be some red patches around the mouth, chin or cheek bones.

WASH 3

The "Uglies"

Skin may start to peel or flake at this stage. Some scabbing and excessive dry spots are not unusual. May wish to wait an extra week prior to the next wash in order for the skin to rest.

WASH 4

Skin continues to show signs of improvement. Irregular pigmentation should begin to fade.

WASH 5

Fine lines are less noticeable. Skin tones become more uniform.

WASH 6

Skin is smoother, with improved texture and clarity. Fine lines are diminished and pores appear smaller. Overall health of the skin is improved.

A beautiful, more youthful complexion awaits you...

at the office of

DR. LANCE GRENEVICKI.

Dr. Grenevicki is pleased to offer his patients medically supervised skin care programs designed to promote healthier, younger-looking skin.

Fine lines, sun damage, age spots, enlarged pores, acne, and irregular pigmentation can be improved or corrected.

Light surface peels, medium depth peels, and laser resurfacing are a few of the options available for skin rejuvenation.

A beautiful, more youthful complexion can be yours.

Call our office at

(321) 674-3900

for complementary evaluation and personal consultation.

THE GLYCOLIC PEEL OR "WASH"

*Alpha Hydroxy Acids or AHA's are non-toxic, naturally occurring substances found in food and plants. Glycolic acid, derived from sugar cane, has been found to be highly effective in the treatment and care of the skin. Administered in our office under the supervision of **Dr. Grenevicki**, these light chemical peels break-up and exfoliate excess dead skin cells on the surface layer of the epidermis while accelerating new cell growth below. Glycolic peels actually stimulate the formation of hyaluronic acid in the dermis allowing the skin to retain more moisture. Most patients can see results immediately. Glycolics are formulated to work together with pharmaceuticals to significantly improve the health and appearance of your complexion. Fine lines are diminished, age spots and areas of irregular pigmentation are lightened, texture and skin tones improve, and the overall condition of the skin is healthier.*

Dr. Grenevicki is a Member of the American Board of Cosmetic Surgery

WHAT YOU CAN EXPECT

Our glycolic wash program consists of six weekly visits. During your initial consultation, your skin is evaluated and a program is designed to meet your specific needs and expectations. Our clinician will begin your "wash" by cleansing your skin and applying a varying strength of glycolic acid. You will experience a slight tingling or prickly sensation which subsides when the glycolic acid is neutralized. It is normal for skin to appear flushed or pink during and immediately after a treatment. Application of foundation or powder is not recommended for several hours after your wash. The program continues at home, in-between weekly visits, by using home care products and prescription drugs or creams best suited to your skin type and condition. At the completion of your initial six week program, your skin will show an improvement in tone, texture, and clarity. Maintenance washes are recommended every four to six weeks in order to keep your complexion at its healthiest.
